Award-winning aluminium

- Deep V Hull with integrated flooding keel system provides industry leading stability at rest
- Hardwearing & fully recyclable
- Substantially lighter than fibre glass
- Improved fuel economy & reduced engine wear

Build quality excellence

- Handbuilt in New Zealand
- Made to order
- Fully customisable

HANDBUILT

AWARD-WINNING

ECO-FRIENDLY

About us

All Extreme hulls are designed in-house. Designed as a range of serious off-shore boats based on proven hull technology, all our boats feature the 'Deep Vee' hull.

The boats boast fine entry for high-speed head sea performance, all while retaining a high chine with full shoulder for excellent sea-handling.

Excellent stability at rest achieved by our automatic integrated flooding keel design, or full-throttle comes from a pair of very large aft chine flats. This also makes for an incredibly dry ride.

It is these features that have allowed Extreme Boats to grow from a small company producing a few boats in 1998 to a sizeable company today.

We now employ 150+ staff and produce around 400 new boats annually thanks to a strong following from boaties both in New Zealand and around the world.

What does this mean to you, an Extreme Boats customer?
You have complete peace of mind knowing your boat is going to be around for generations to come.
